

Infobric Equipment and Assets

Environmental Policy

Infobric Equipment & Assets develops and delivers digital services and software solutions for machine rental operations and fleet management of vehicles, machines, equipment and assets.

Infobric Equipment & Assets recognises that our environmental impact arises primarily from our own operations and from how our digital solutions are used by our customers. Environmental responsibility therefore means reducing negative environmental impact by promoting efficient use of resources and supporting more sustainable ways of working. We are committed to protecting the environment by preventing pollution, reducing environmental impact and continuously improving our environmental performance. This includes fulfilling applicable environmental legislation and other binding requirements.

This commitment is realised by:

- assisting our customers in reducing their environmental footprint through digital solutions that support more efficient use of vehicles, machines and assets, and
- working to minimise environmental impact within our own operations, including impacts related to energy use, business travel and other activities under our control.

These efforts are carried out with consideration for technical and commercial conditions.

Environmental responsibility is a shared responsibility at Infobric Equipment & Assets. All employees are expected to act with awareness and accountability, and to actively contribute to reduced environmental impact and to meeting relevant expectations from our interested parties.
