Infobric Equipment and Assets Information Security Policy

Infobric Equipment & Assets develops and delivers digital services and software solutions for fleet management of vehicles, machines, equipment and assets.

Information security at Infobric Equipment & Assets is a fundamental part of delivering secure, reliable and trusted digital products and services. Protecting customer data and information processed within our systems is essential to maintaining customer trust, supporting our business objectives and enabling secure and reliable business operations.

We are committed to establishing, implementing and continuously improving an information security management system that ensures the confidentiality, integrity and availability of information, and that supports secure product development, delivery and operation.

This commitment includes:

- protecting customer data and other information assets against unauthorised access, loss, alteration or unavailability,
- ensuring our digital products and services are designed, developed and operated with information security in mind,
- fulfilling applicable legal, regulatory and contractual information security requirements, taking into account relevant requirements from interested parties,
- managing information security risks in a systematic and structured manner, and
- continuously improving our information security performance.

These efforts are carried out with consideration for technical and organisational conditions and in alignment with our overall business objectives and risk management.

Information security is a shared responsibility at Infobric Equipment & Assets. All employees are expected to act with awareness and responsibility, and to actively contribute to protecting customer data, information assets and the security of our products and services through their daily work, decisions and behaviour.
